

BALLISTIC PAW

The Ballistic Paw is a powerful explosive solution for low order techniques. It can be used for all forms of EOD operating, in both land and maritime situations.

The Ballistic Paw is a self-fill device using a non-explosive flammable liquid that is mixed with a small quantity of sensitizer immediately before use – the device now becomes an explosive unit. The paws are supplied in two rugged Peli cases holding 46 devices, less detonators.

IMMEDIATE ADVANTAGES OVER CONVENTIONAL 1.1 EXPLOSIVES:

- Security
- Transportation
- Compatibility
- Shipping
- Product costs

SPECIFICATIONS

- UN Class 3 Flammable Liquid (Air/Land/Sea/Rail) for movement
- 27% greater power than TNT equivalent
- VOD approx 6800 m/s
- 1620 Peli Case – approved packaging (27kg total weight) 40 units
- 2400 Peli “Storm” Case – approved packaging (7kg total weight) 6 units
- Device all up weight – 350gm
- Takes any military detonator and civilian detonators N°10 or above, as well as det cord boosters
- EOD uses for all munitions ranging from (AP) to large metal cased munitions (can be used in tandem on larger targets employing the vent and burn technique)
- Directional – point focal
- Steel Plate > 15mm penetration
- Simple tripod / 45 degree attack angle – can be fired on all axis planes
- No tools required, simple to use and minimal training required
- Rapid deployment times / stand down times (Det removed, liquid poured out immediately making device safe)

BALLISTIC PAW USED IN A BREACHING ROLL - 6CM STEEL DOOR
